MEMORANDUM

TO: Hi-Mill File

FROM: Karla Johnson, RPM

RE: Solvent Spill

In their response to our 104(e) information request (much of which is claimed as CBI) the Beards' (the owners of the site) told us that between 1978 and 1980, while constructing an addition to the northeast side of their building, a solvent delivery line between a former 250 gallon aboveground storage tank and degreasing equipment in the production building was damaged. As a result, up to 250 gallons of trichloroethylene-based solvent was released. The damaged underground product line was replaced with an above ground product line.
